

TCX3901 Industrial Practice

Project Title

(Non-Work-Related Project)

By

Member One (A0000001V)

Member Two (A0000002W)

Member Three (A0000003X)

Member Four (A0000004Y)

Member Five (A0000005Z)

Bachelor of Information Technology Programme

School of Continuing and Lifelong Education (SCALE)

School of Computing (SoC)

National University of Singapore

AY2026/27

Supervisor: Dr. Han Liang Wee, Eric

Deliverables:

Report: 1 Volume

Repository: <https://github.com/your-group/your-repo> (replace and add supervisor to repo)

Individual Contributions

State each member's role in the group and their responsibilities (Table 1), then each member's contributions for the period covered by each part. Update this page at every submission.

For an individual project (not a team), individual contributions are not needed: set `\individualprojecttrue` in `config.tex` and this section is replaced by a declaration of individual work.

Member	Role	Responsibilities
Member One	Team Lead	
Member Two	Backend Developer	
Member Three	Frontend Developer	
Member Four	QA & Testing Lead	
Member Five	DevOps & Documentation	

Table 1: Roles and responsibilities

Part I: Proposal *State each member's contributions up to the proposal.*

Use of AI Tools *State specifically which AI tools were used, for which tasks (e.g. drafting a named section, generating code for a named component, debugging) and how the output was checked. "I used AI to learn" is too vague. If none were used, say so.*

I Proposal

1 Introduction

Introduce the project so that the report is self-contained: what the system or product is, its background and context, and the problem it addresses. Write directly, and group related sentences into full paragraphs rather than one sentence per paragraph. Cite your sources, with their dates, e.g. (Lamport, 1978).

Existing Solutions *Survey the closest existing systems or related work and cite them: how each works, and why it is still insufficient for the problem.*

Motivation *Explain why the project is worth doing: the gap or need it responds to, and who benefits from its outcome. Keep this about the problem, not about applying what you have learnt, which is true of any project.*

2 Objectives and Scope

Objectives *State the overall objective in one or two sentences of prose (“We aim to build ... such that ...”). An objective says what the project achieves; it is not a list of deliverables or deadlines, and the success criteria belong with the user stories below.*

Scope *In a short paragraph of prose, say what the project covers and where its limits are, with any assumptions and constraints (e.g. platform, language, data sources). State each point once: what is out of scope need not be repeated as an assumption.*

Requirements *Give the key requirements as user stories, each with testable conditions of satisfaction (CoS). The full backlog goes in an appendix.*

US1 *As a <role>, I want <capability>, so that <benefit>. CoS: <a condition that can be tested>; <another>.*

US2 *As a <role>, I want ..., so that ... CoS: ...*

3 Approach

Describe how you will carry out the work: the development process (e.g. iterations and what each one delivers) and how progress is tracked. State what you will use, not what is “being considered”.

Architecture *Present the planned structure of the system: its components, what each is responsible for and how they interact. A diagram helps. The reader should be able to tell how the code will be organised.*

Design Decisions *Record the key decisions about the system. For each one, give the choice made, the alternatives considered and the reason for the choice.*

Project Plan *Present the development plan (Table 2): how the work is split into iterations, and which user stories are implemented in what sequence. The rows below are examples.*

Iteration	Period	User Stories	Outcome
1	Sem 1, Weeks 6–8	US1, US2	<i>Core story working end to end</i>
2	Sem 1, Weeks 9–13	US3, US4	<i>Must-have stories complete</i>
3	Sem 2, Weeks 1–4	US5, US6	<i>Integrated and deployed</i>
4	Sem 2, Weeks 5–8	US7	<i>Evaluation complete</i>
5	Sem 2, Weeks 9–12	—	<i>Fixes from the evaluation</i>

Table 2: Development plan

Appendices

Appendix A User Story Backlog

List the full backlog of user stories, each with a unique identifier and its conditions of satisfaction. Add further appendices as needed, e.g. background on an existing system, data sources or supplementary figures.
